5.Operators

1. Write the program to demonstrate the working of Binary Arithmetic Operators ?
   Ex:
   Input :
   Enter a and b values and result to perform operations on (+,-,*,/,%)
   Output :
   Addition Operator: 15
   Subtraction Operator: 5
   Multiplication Operator: 50
   Division Operator: 2
   Modulo Operator: 0

2. Write the program to demonstrate the working of Unary Arithmetic Operators ?
   Ex:
   Input :
   Enter a value and res to perform operations on (a++,a--,++a,--a)
   Output :
   a is 11 and res is 10
   a is 10 and res is 11
   a is 11 and res is 11
   a is 10 and res is 10

3. Write the program to demonstrate the working of Relational Operators ?
   Ex:
   Input :
   Enter a and b values and result to perform operations on (==,>,<,>=,<=,!=)
   Output :
   Equal to Operator: False
   Greater than Operator: False
   Less than Operator: True
   Greater than or Equal to: False
   Lesser than or Equal to: True
   Not Equal to Operator: True
