1.Basics

1. Declare a variable of data type int with name empID

2. Declare a variable of data type string with name empName

3. Assign a value 5 for the empId variable and print the value of empId on console

4. Assign a value "Puja" for the empName variable and print the value of empId on console

5. Write a program to check whether it is odd or even
    Ex: Input - 2
        Output - even

6. Write a program to swap 2 numbers
    Ex : Input - 22,65
        Output - 65,22
